

UEF ACOUSTIC PANELS & UEF ACOUSTIC DOTS

CAUTION: Do not use a knife when opening the inside packaging that contain frames, damage may occur. Always use provided gloves when handling panels or permanent visible marks may occur when panels are touched. Leaving visible marks will void 30 day return privileges.

PLACEMENT: For temporary placement and testing, use the included removable foam squares to mount the panels. Clean wall thoroughly with alcohol or a household degreaser. Remove film from one side and FIRMLY place a foam square in each upper corner directly on the brown backer board. Remove 2nd film from foam and place firmly onto your mounting surface, continue holding pressure for 10-20 seconds. Hold the panels in place until you are sure the panels are firmly attached to the wall. Do not attach and remove foam squares more than two times as they will lose their adhesion. Do not use the foam squares as permanent fastening devices. They are only meant for temporary placement and will fall overtime, causing damage to the panels. When final position has been decided, use the included nails for permanent installation (if you do not want to use nails, we recommend 3M hooks or a similar product with a rating of 1+ pounds per hook).

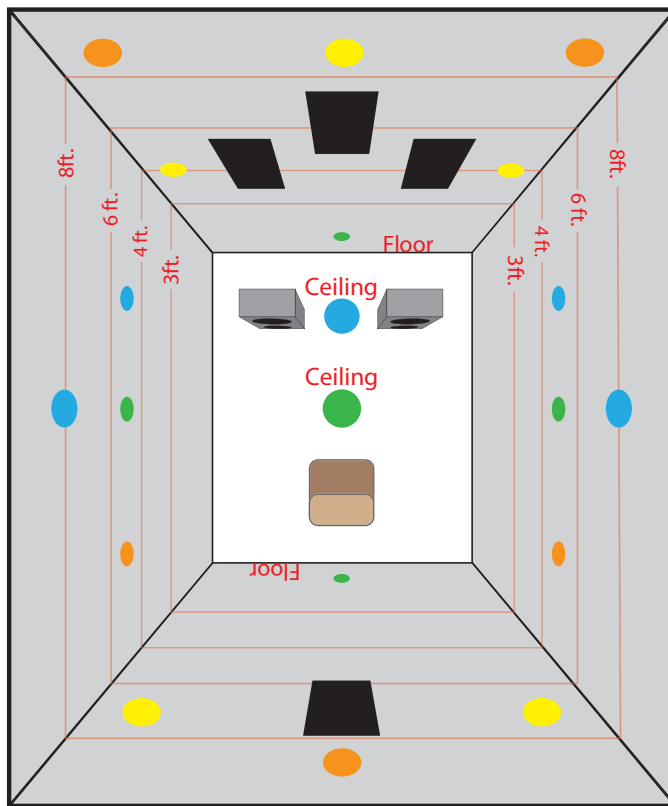

CLEANING: Do not use liquid cleaners or damage may occur. We recommend using pressurized air, a soft bristled paint brush or a feather duster.

UEF DOT PLACEMENT

PLACEMENT: For temporary placement and testing, clean wall thoroughly with alcohol or a household degreaser. Attach a small amount of the included "white tac" to the back (label side) of the UEF Acoustic Dot. Follow the included guide for mounting placement. Once the final position has been decided, you can use the "white tac" as the final mounting material or for a more permanent placement, remove the film from the back of the UEF Acoustic Dot and place on wall. **CAUTION:** Placement with adhesive back overtime may become permanent and cause damage to mounting surface when removed.

CLEANING: Do not use liquid cleaners or damage may occur. We recommend using pressurized air, a soft bristled paint brush or a feather duster.

4 PANELS - UP to 20 DOTS

- Green = Level 1 (1st 5 dots)
- Yellow = Level 2 (2nd 5 dots)
- Orange = Level 3 (3rd 5 dots)
- Blue = Level 4 (4th 5 dots)

You can effectively use 3 levels of room treatment with UEF Acoustic Panels.

Level 1 through 3 each contain 4 UEF Acoustic Panels.

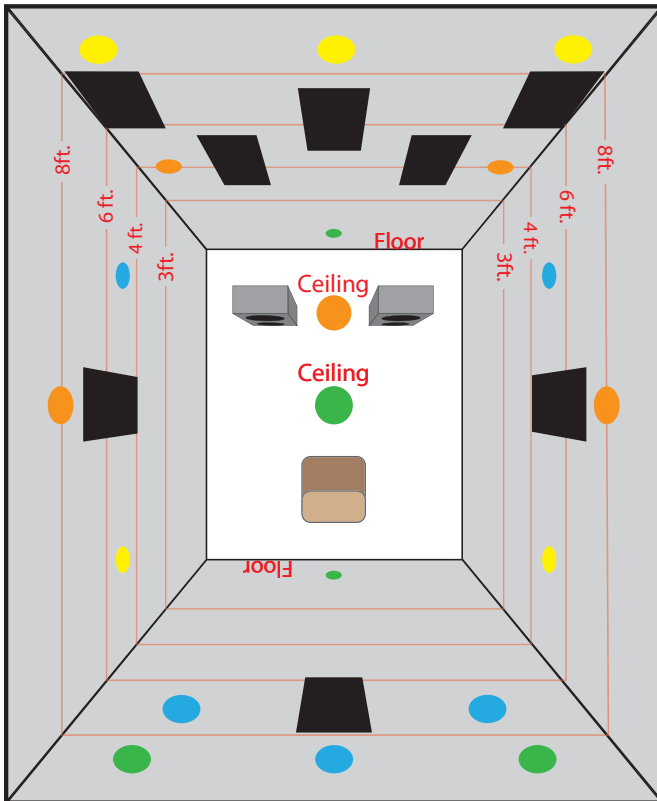

Level 1 consists of 1st panel centered on front wall approximately 4-5 feet from floor. 2nd and 3rd panel on the left and right side of front wall, 3.5-4.5 feet from the floor, 12" from the wall. 4th panel is center on back wall approximately 5-6 feet from floor.
